

ABOUT UNCOVERED THAI STOCKS

A significant number of equities listed on the Stock Exchange of Thailand (SET) and Market for Alternative Investment (mai) lack formal research coverage from brokerage firms. This coverage gap typically arises as analytical resources are concentrated on large-capitalization, high-liquidity stocks, leaving many smaller and mid-sized companies uncovered.

The coverage gap can provide opportunities to identify well-performing companies that are mispriced in the market.

Uncovered Thai Stocks employs a quantitative approach to analyze this under-researched market segment. From the A. Stotz Investment Research Stock Picking Checklist, we have backtested the combination of factors that have historically generated the best return. With that model, we evaluate a universe of about 250 uncovered Thai stocks each quarter and publish AI-powered reports on the Top 50 companies that exhibit attractive characteristics based on our model.

The objective is to provide investors with objective, data-driven insights that serve as a preliminary resource. These reports are intended to be a starting point for further research.
